

William P. Thurston

The Geometry and Topology of Three-Manifolds

Electronic version 1.1 - March 2002

<http://www.msri.org/publications/books/gt3m/>

This is an electronic edition of the 1980 notes distributed by Princeton University. The text was typed in \TeX by Sheila Newbery, who also scanned the figures. Typos have been corrected (and probably others introduced), but otherwise no attempt has been made to update the contents. Genevieve Walsh compiled the index.

Numbers on the right margin correspond to the original edition's page numbers.

Thurston's *Three-Dimensional Geometry and Topology*, Vol. 1 (Princeton University Press, 1997) is a considerable expansion of the first few chapters of these notes. Later chapters have not yet appeared in book form.

Please send corrections to Silvio Levy at levy@msri.org.

Index

- (G, X) -manifold, 27
- M_Γ , 179
- N_Γ , 180
- O_Γ , 180
- P_Γ , 180
- $PSL(2, \mathbb{C})$, 92–96
- $\mathcal{GL}(S)$, 209, 215
- \mathcal{G} -manifold, 27
- $\mathcal{ML}(S)$, 209, 210, 251
- $\mathcal{ML}_0(S)$, 209, 251
- $\mathcal{PL}(S)$, 209
- $\mathcal{PL}_0(S)$, 210, 263
- \mathcal{H} -foliation, *see also* foliation
- \mathcal{G} -orbifold, 301
- $N(O)$, 347
- \mathcal{T}_γ , 243

- $N(O)$, 351

- accidental parabolics, 257
- action
 - discrete orbits, 175
 - properly discontinuous, 174
 - wandering, 175
- Ahlfors' Theorem, 180
- algebraic hyperbolic manifolds, 168
- algebraic limit, 225
- algebraic numbers, 143
- Andreev's Theorem, 330

- Bass, H, 143
- bending measure, 189–191
- Bers, 111
- billiard table, 298
- Borromean rings, 33–34, 105, 300, 322

- commensurable with Whitehead link, 141
- boundary mirror, 301
- branched cover over a link, 2

- circle packing, 330
 - nerve of, 330
- commensurability classes, 144
 - infinite number of, 150
- commensurable
 - and cusp structure, 142
 - discrete subgroups of $PSL(2, \mathbb{C})$, 140
 - manifolds, 140
 - with complete manifolds, 141
- complete
 - (G, X) -manifold, 35
 - \mathcal{H} -foliation, 64
- completeness criteria, 36, 38, 41, 42
- completion
 - of a hyperbolic 3-manifold, 54–56
 - of a hyperbolic surface, 41–42
- cone manifolds, 55–56
- convergence
 - algebraic, 225
 - geometric, 225
 - strong, 226
- convex, 177
 - locally, 177
 - implies convex, 177
 - strictly, 178
 - and homotopy equivalence, 179
- convex hull, 171
 - boundary, 185
- corner reflectors, 309
- Coxeter diagram, 326

INDEX

- extra, 216
- deformations
 - of a 3-manifold, 85
 - dimension of, 88, 97
 - extend to Dehn filling, 103
 - of compact convex hyperbolic manifolds, 178
- Dehn surgery, 2, *see also* figure-eight knot invariants, 57
- developing map, 35, 54, 185
 - of a (G, X) -orbifold, 309
 - of a convex manifold, 177
 - of an affine torus, 37
- discrete, 64
- domain of discontinuity, 174
 - retraction onto convex hull, 174
- edge equations, 49–51
- elementary group, 171
- elliptic
 - why distressing, 10
- essentially complete, 244
- Euclidean triangles, 47
- Euler number
 - for a fibration, 323
- extension of a vector field, 288
 - Curl and Div, 292
 - direction derivative of, 290
- fibration
 - over an orbifold, 319, 323
- figure-eight knot, 4–7, 29–31, 120
 - commensurable with $PSL(2, \mathcal{O}_3)$, 149
 - complete hyperbolic structure, 54
 - Dehn surgery on, 58–61, 70
 - yields hyperbolic manifold, 61
 - fundamental group, 172
 - gluing diagram, 4
 - incompressible surfaces in, 72–83
 - limit set, 172
 - parametrization space of complement, 52
 - volume of complement, 164
- foliation
 - developing map for, 63
 - hyperbolic, 62, 64
- Fricke space, 92
- Fuchsian group, 172, 192
- fundamental group
 - acts ergodically on S_∞^{m-1} , 111
- Gauss-Bonnet
 - for orbifolds, 312
- Gehring, 111
- geodesic flow
 - conditions for ergodicity, 277
- geodesic lamination, 186, 200, *see also* geometric and measure topology, *see also* lamination
 - complete, 196
 - ending, 238
 - essentially complete, 243, 246
 - measure on, 207
 - near a cusp, 201
 - realizable, 208, 211, 214, 240
 - criterion for, 261
 - train track approximation of, 204, 206, 210, 213
 - with compact support, 239
- geodesics
 - on hyperboloid, 18
- geometric limit, 225
- geometric structure, 85
- geometric topology, 225
 - and compactness, 228
 - on geodesic laminations, 208
- geometrically finite, 180, 183
 - and cusps, 182
 - hyperbolic 3-manifold, 203
- geometrically near, 118
- geometrically tame, 219, 221, 229
 - almost, 230, 240
 - and algebraic convergence, 259
 - and geodesic flow, 278
 - implies topologically tame, 240
- Gieseking, 29
- Gromov, 102
- Gromov's
 - invariant, 123, 140
 - for manifolds with boundary, 134
 - norm, 123, 127
 - Theorem
